

Project Overview

In this project, you'll use Tableau to build dashboards and tell a story with data. This is an essential skill as an analyst. You'll be exploring data from *The Movie Database* to draw out and display interesting patterns.

You'll start by defining some leading questions, then you'll explore the data to find answers, and finally build visualizations to communicate those answers and tell a story.

Installing Tableau

If you haven't already done so, you'll need to install Tableau onto your computer. Follow [this link](#) for more information on how to download and install Tableau on your computer.

In order for reviewers to be able to see your project, you must save it as a Tableau Public file and upload it to Tableau servers. [Here is a link](#) for instructions on how to do this.

How Do I Complete this Project?

This project uses skills learned throughout the "Data Visualization in Tableau" course. To complete this project:

- Go through the course
- Apply the skills learned in the course to complete the project outline in the project details section.
- Use our guidelines and rubric to help build your project.
- When you're ready, submit it to us for review using the submission template found in the supporting materials section.

Skills Required

In order to complete this project, you must be able to:

- Explore data using Tableau
- Create Tableau Dashboards
