## Saving Reports to Your Computer

If you want to output the full reports from your models for later reference, you can use the **Render** tool in Alteryx to create a file that contains the report.

Low Variability

The following are two examples of low variability where a data field can heavily skew towards one type of data:

The histograph of this variable shows that the majority of the data is skewed towards "None".

The other type of low variability occurs where the data is entirely uniform and there is no other variations of the data:

This histograph of this graph shows a variable that only contains the data "Yes"
